No change	22
Tag changed	4
Tag removed	46
Scope and severity changed	4
Example removed	7
Scope and severity changed and example removed	0
New tag issued at IDR	4

# Past Non-compliance

# Nursing Home Quality, CMS Should Continue to Improve Data and Oversight, GAO Report, October 2015

- Looked at reported nursing home quality and oversight in recent years
- Late 2014: 23 QIS states, 25 traditional states, and 3 states did both methods (Washington, DC was counted as a state)
- Four data sets:
  1. 2005 – 14: deficiencies on standard surveys, decreased 41%
  2. 2005 – 14: consumer complaints increased 21 %
  3. 2009 - 14: Staffing levels increased 9 %
  4. 2011 – 14: Subset of clinical quality measures, most decreased

# Nursing Home Quality Report

- Recommendations: CMS should implement a clear plan for on-going auditing of self-reported data and establish a process for monitoring oversight modifications to better assess their effects
- CMS: “plan to develop a hybrid model of the QIS and traditional surveys, with the long-term goal of moving all states to this hybrid model. However, CMS officials said dates for developing and implementing the new hybrid model have not been set.”

# Maryland Data from Nursing Home Quality Report

- Average number of serious deficiencies per nursing home cited on standard surveys: 0.08 to 0.14, 68.1% increase from 2005 to 2014
  - Nationally this decreased 41%
- Average number of consumer complaints per nursing home: 5.7 to 6.1, increase of 5.9% from 2005 to 2014
  - Nationally this increased 21%
- Total nurse staffing hours per resident per day: 4.2 to 4.7, 12.2% increase from 2009 to 2014
  - Nationally this increased 9%
