Mitigate

End-to-end Cyber Defense and Governance

Mitigate delivers enterprise-grade cybersecurity through a fully managed platform that unifies 24/7 SOC monitoring, real-time threat detection, automated response, and continuous compliance automation.

Unlike traditional MSSPs with fragmented tools and bolt-on reporting, **Mitigate** puts compliance at the core—automatically mapping controls to HIPAA, NIST, FERPA, PCI-DSS, CJIS, and ISO 27001 while capturing audit-ready evidence across four scalable tiers.

2024 and 2025 Statistics:

67%
Of healthcare organizations were hit by ransomware events.

$9.8 million
The average cost of a data breach in healthcare is growing at twice the rate of other industries.

$9,000 per minute
Average hospital loss during a full system outage from a ransomware attack, with recovery times often stretching to 17 days.

29%
Increase in mortality rates at attacked hospitals directly connects cybersecurity to patient safety.

Core Capabilities:

Complete Device Visibility
Gain real-time, agentless discovery of all connected assets.

Real-Time Threat & Risk Detection
The solution continuously analyzes device behavior and communication patterns to detect.

24/7 Managed Detection & Response (MDR)
This ensures fast containment, minimized downtime, and reduced operational impact.

Governance, Compliance & Workflow Automation
Users get dashboards, workflows, audit-ready evidence, and executive-level reporting.

Vulnerability Management & Prioritization
The platform maps vulnerabilities across all device types IT, OT, IoT, and IoMT and uses contextual scoring to prioritize which issues have the highest operational or clinical impact.

Network Segmentation & Policy Enforcement
The solution integrates with NAC and firewall systems.

Four Scalable Service levels, underwritten by a Cyber Insurance Partnership.

RCM&D
A UNISON RISK ADVISORS Company

Foundation	Essential	Advanced	Enterprise
Guaranteed Underwriting	Guaranteed Underwriting	≈15% premium reduction	≈30% premium Reduction

Why Mitigate is Different:

One platform.
One vendor relationship.
No coverage gaps.

Purpose-built anti-ransomware defeats encryption at execution before it spreads, backed by autonomous endpoint protection, enterprise SIEM, and integrity-verified recovery.

One Platform. Zero Point-Solution Complexity

Anti-Ransomware	Vulnerability Management
Endpoint Detection & Response	Cloud Security Monitoring
Managed Detection & Response	Third-Party Risk Mgmt
SIEM & Log Management	Secure Backup & Recovery
Network Anomaly Detection	Disaster Recovery & BCP
Identity & Access Management	Compliance Automation

The Mitigate Approach:
The path from features to outcomes

Features	Traditional MSSP	Mitigate
IoT/OT/IoMT visibility	❌ Limited	✅ Full cyber-physical visibility
Agentless discovery	❌ requires agents	✅ 100% agentless, zero disruption
Compliance automation	❌ Manual	✅ Built-in (HIPAA, NIST, CJIS)
SOC maturity	❌ IT-focused only	✅ Clinical, IT & OT-aware MDR
Governance layer	❌ Rare	✅ +Mitigate dashboards & workflows
Operational/Clinical risk insight	❌ Not supported	✅ PACS, IoMT, SCADA, building systems
Executive reporting	❌ Minimal	✅ Full risk, compliance, scorecards
Procurement	❌ Lengthy	✅ ANM, Carahsoft, channel-optimized
Cross-domain integration	❌ Separate tools	✅ Unified platform

Healthcare is the #1 most targeted industry for ransomware

72%
of healthcare data breaches originate from third-party vendors.

75%
of hospitals are unprepared for cyber threats.

67%
of healthcare organizations were hit by ransomware in the last year.

21%
are healthcare focused.

HIPAA
risk analysis is the #1 OCR violation.
